## PLATFORM DEEP DIVE / Core components / Core extensions / Content management / Source systems

If multiple

The fallback content to display on prerendering

values are needed to communicate with other systems, source systems can be used.

The screenshot displays the FLOWX.AI user interface. On the left is a sidebar with the FLOWX.AI logo at the top. Below the logo, there are two main sections: 'Processes' and 'Content Management'. Under 'Processes', there are links for 'Definitions' and 'Active process'. Under 'Content Management', there are links for 'Enumerations', 'Substitution tags', 'Content models', 'Languages', and 'Source systems' (which is highlighted in blue). The main content area on the right is titled 'Source Systems' and includes a 'New' button in the top right corner. Below the title is a table with two columns: 'Code' and 'Name'. The table contains two entries: one with 'FLEX' as the code and 'Core Banking' as the name, and another with 'FLOWX' as the code and 'FlowX' as the name. Each entry has edit and delete icons to its right.

Code	Name		
FLEX	Core Banking		
FLOWX	FlowX		

On the main screen inside **Source systems**, you have the following elements:

- **Code** - not displayed in the end-user interface, but used to assure value uniqueness
- **Name** - the name of the source system
- **Edit** - button used to edit a source system
- **Delete** - button used to delete a source system
- **New** - button used to add a new source system

## Adding new source systems

To add a new source system, follow the next steps.

1. Go to  
The fallback content to display on prerendering  
and select the **Content Management** tab.
2. Select **Source systems** from the list.
3. Fill in the necessary details:
  - Code
  - Name
4. Click **Add** after you finish.

## Source Systems
