Industry solutions

In order to help you develop faster solutions, we've built our platform with extensibility in mind. This is why we've developed both industry-specific solutions and general plugins that extend the functionality of the platform in a more general way.

Our Finance solutions suite includes customer or employee journeys - such as loan origination, onboarding, mortgage or MiFID. These are like a template based on best industry practices, that you can take, customize and integrate with your process and data, and launch in a matter of days.

Below you can find an example of a mortgage process flow:
