FLOWX.AI DESIGNER / Managing a process flow / Creating a new process definition

The first step of defining your business process in the

The fallback content to display on prerendering is adding a new **process definition** for it.

This should include at least one **START** and **END** node.

Steps for creating a new process definition

To create a new

The fallback content to display on prerendering :

1. Open

The fallback content to display on prerendering and go to the **Definitions** tab.

2. Click the **New process** button, using the **breadcrumbs** from the top-right corner.

3. Enter a unique name for your process and click **Create**.
4. You're automatically taken to the **FLOWX Designer** editor where you can start building your process.

The screenshot displays the FLOWX.AI Designer interface. On the left is a sidebar with navigation options: Processes (Definitions, Active process), Content Management (Enumerations, Substitution tags, Content models, Languages, Source systems), Plugins (Task Manager, All tasks, Hooks, Stages, Notification templates, Document templates), General Settings (Generic Parameters), and Platform status. The main area is titled 'Process Definitions' and features a search bar. It is divided into two sections: 'Drafts / In progress' and 'Published'.

Process Definitions

Search by process definition name

Drafts / In progress
